Data Management & Insights

Confident decisions depend on quality data transformed into trusted insights

In today's project environment, information is often spread across multiple systems, stakeholders and reporting processes. Cost, schedule, risk and performance data can quickly become fragmented, making it difficult to see the full picture and make decisions with confidence.

We help clients bring these disconnected data sources together to create a trusted source of truth. Combining project, cost and advisory expertise with data management and analytics capabilities, we transform complex information into meaningful insights that support better decisions across projects, programs and portfolios.

The result is greater confidence in the information being used, clearer visibility of risks and opportunities, and better outcomes throughout the project lifecycle.

Trusted data and actionable insights

A trusted source of truth

Data quality: Resolve gaps and inconsistencies and strengthen governance.

Decision focus: Our project, cost and advisory specialists align data with key questions.

Shared information: Reduce reporting discrepancies and improve transparency.

A clear view of performance

Integrated view: Connect cost, schedule, risk and performance data.

Tailored reporting: Deliver timely insights through dashboards, analytics and reviews.

Forward planning: Use predictive data, trends and forecasts to identify risks, test scenarios and respond.

Reliable reporting, forecasting and decisions

Connecting insights across the portfolio

Connect

Combine project, financial, schedule, risk and delivery data.

Compare

Compare project health to spot trends, dependencies, risks and opportunities across the portfolio.

Govern

Align measures and access permissions so leaders compare projects consistently and see appropriate detail.

Portfolio health at a glance

Portfolio view

Follow cost to date, estimate at completion, progress, contingency and critical activities in one executive view.

Earlier signals

Health scores and predictive risk indicators draw attention to changing cost or schedule pressure before it becomes harder to manage.

Project detail

Move from portfolio patterns to project-level detail to understand the drivers and dependencies behind each signal.

Governed AI insights

Ask in plain English

Ask everyday questions about cost, schedule and risk across projects. For example: “Which projects show rising cost and schedule risk?”

Get the main point

AI summaries bring key changes into executive-ready language and point readers towards the underlying portfolio data.

Keep it governed

Validated prompts support consistent, data-driven answers, while role-based permissions control which information each user can access.

Layered reporting framework

Connected reporting from source detail to national portfolio decisions

Experience

Empowering
growth.

Suburban Rail Loop

Transport

Investment in Victoria's infrastructure and urban planning is making way for growing economic precincts outside of Melbourne's CBD. The Suburban Rail Loop (SRL) will better connect Victorians, slash travel times and ensure the city grows in the right places.

When completed, the 90km SRL will transform Victoria's public transport system, linking every major rail line from the Frankston line to the Werribee line, via the airport, ensuring Melbourne remains one of the world's most livable cities.

The project will be delivered in stages over several decades, with SRL East the first to be constructed. Future SRL sections to be developed include SRL North (Box Hill to Melbourne Airport), SRL Airport (Melbourne Airport to Sunshine), and SRL West (Sunshine to Werribee).

SRL East will include 26km of twin tunnels, a train maintenance facility and six underground stations from Cheltenham to Box Hill. Since 2018, WT's been working closely with Suburban Rail Loop Authority (SRLA) providing cost advisory services across the Tunnelling, Stations, Linewide and Rolling Stock packages. We support the project with whole-of-life cost estimation, cost planning, value engineering, probabilistic risk modelling, tender evaluation and negotiation, and project controls services.

Kardinia Park Stage 5 Redevelopment

Sports & Venues

A new era is beginning in Geelong with the completion of Stage 5 of the Kardinia Park (GMHBA Stadium) Redevelopment – the culmination of a massive, 5-stage program of works over the last 20 years. The Kardinia Park precinct and stadium is home to the Geelong Football Club and hosts a variety of world-class sporting events, as well as concerts, functions and community events.

Having supported previous stages of the redevelopment, WT was brought on board alongside KPST to provide expert cost planning and value management services for Stage 5, establishing scope parameters and deliverables that would be feasible within the \$142m project budget. This included feasibility, schematic design, design development and pre-tender cost plans, life cycle cost analysis, tender evaluation and award, contingency management plans, risk modelling analysis, post-contract reporting, variation assessments and financial reporting for the funding facility.

Melbourne Airport

Aviation

Keeping up with growing demand is a major challenge for airports in busy cities and regions. Expansion and upgrades are highly capital intensive, and the complex suite of interconnected projects must be carefully staged and controlled to maintain smooth, continuous operations and a seamless passenger experience.

WT has been a trusted advisor to Melbourne Airport since the 1990s. Over that time, we've supported a range of different projects within the broader programme of works that any modern airport must tackle to keep up with a growing population, rising passenger numbers, increased flight routes, technological change, and the ever-increasing expectations of what a world-class airport should provide.

Coles National Capital Investment Program

Retail

Since 2021, WT has been supporting Coles Group through a dedicated account team of over 55 quantity surveyors, cost engineers and digital innovators. Team members are based across New South Wales, Victoria, Queensland, South Australia and Western Australia, ensuring a consistent national approach underpinned by local knowledge.

Our scope includes project feasibility, new store delivery, refurbishments, tactical projects and freehold developments. On average we deliver 200 projects per year, with a high degree of cost planning accuracy, limited variations and tight construction programs.
